

Ch 6-A: Looping and Matrix Practice

이 Chapter에 있는 문제들을 coding할때에는 아래 나열된 Built-In Function들 이외의 Built-In Function이나 External Module에 있는 Function들 을 쓰면 안됨

`print(), range(), len(), append()`

1. Write a function `f1(n)` that prints the following triangle.

```
>>> f1(5)
```

```
1
```

```
1 2
```

```
1 2 3
```

```
1 2 3 4
```

```
1 2 3 4 5
```

```
>>> f1(0)
```

```
>>> f1(1)
```

```
1
```

2. Write a function `f2(n)` that prints the following triangle.

```
>>> f2(3)
```

```
1
```

```
2 3
```

```
4 5 6
```

```
>>> f2(0)
```

```
>>> f2(1)
```

```
1
```

```
>>> f2(5)
```

```
1
```

```
2 3
```

```
4 5 6
```

```
7 8 9 10
```

```
11 12 13 14 15
```

3. Write a function `f3(n)` that prints the following triangle.

```
>>> f3(3)
```

```
1
2 3
4 5 6
2 3
1
```

```
>>> f3(4)
```

```
1
2 3
4 5 6
7 8 9 10
4 5 6
2 3
1
```

```
>>> f3(0)
```

```
>>> f3(1)
```

```
1
```

4. Write a function `f4(n)` that prints the following triangle.

```
> > > f4(3)
```

```
1
```

```
2 3
```

```
4 5 6
```

```
7 8
```

```
9
```

```
> > > f4(0)
```

```
> > > f4(1)
```

```
1
```

5. Write a function `f5(matrix)` that will print the sum of each row of the matrix.

```
>>> f5([[1,0],[0,1]])
```

```
1
```

```
1
```

```
>>> f5([[1,2,3],[4,5,6]])
```

```
6
```

```
15
```

```
>>> f5([[1],[2],[3],[4]])
```

```
1
```

```
2
```

```
3
```

```
4
```

6. Write a function `f6(matrix)` that will print the diagonals of the matrix. Assume the matrix is a square.

```
>>> f6([[1,0],[0,1]])
```

```
1
```

```
1
```

```
>>> f6([[1,2,3],[4,5,6],[7,8,9]])
```

```
1
```

```
5
```

```
9
```

```
>>> f6([[1]])
```

```
1
```

7. Write a function `f7(matrix)` that prints the sum of every row in the matrix.

```
>>> f7([[1,0],[0,1]])
```

```
1
```

```
1
```

```
>>> f7([[1,2,3],[4,5,6]])
```

```
6
```

```
15
```

```
>>> f7([[1],[2],[3],[4]])
```

```
1
```

```
2
```

```
3
```

```
4
```

8. Write a function `f8(matrix)` that returns the sum of all the elements in the matrix.

```
>>> f8([[1,0],[0,1]])  
2
```

```
>>> f8([[1,2,3],[4,5,6]])  
21
```

```
>>> f8([[1],[2],[3],[4]])  
10
```

9. Write a function `f9(matrix)` that returns the product of all the elements in the matrix.

```
> > > f9([[1,0],[0,1]])  
0
```

```
> > > f9([[1,2,3],[4,5,6]])  
720
```

```
> > > f9([[1],[2],[3],[4]])  
24
```

10. Write a function `f10(matrix)` that will print the odd numbers in the matrix with each row on one line.

```
>>> f10([[1,0],[0,1]])
```

```
1
```

```
1
```

```
>>> f10([[1,2,3],[4,5,6]])
```

```
1 3
```

```
5
```

```
>>> f10([[1],[2],[3],[4]])
```

```
1
```

```
3
```

11. Write a function `f11(matrix1, matrix2)` that will return the sum of `matrix1` and `matrix2`. Assume `matrix1` and `matrix2` have the same dimensions.

```
>>> f11([[1,0],[0,1]],[[1,0],[0,1]])  
[[2, 0], [0, 2]]
```

```
>>> f11([[1,2,3],[4,5,6]],[[-1,-1,-1],[-1,-1,-1]])  
[[0, 1, 2], [3, 4, 5]]
```

```
>>> f11([[1],[2],[3],[4]],[[4],[3],[2],[1]])  
[[5], [5], [5], [5]]
```

12. Write a function `f12(matrix1, matrix2)` that will return the product of `matrix1` and `matrix2`. Assume `len(matrix1[0]) == len(matrix2)`.

```
>>> f12([[1,0],[0,1]],[[1,0],[0,1]],)  
[[1, 0], [0, 1]]
```

```
>>> f12([[1,2,3],[4,5,6]],[[-1,-1],[-1,-1],[-1,-1]])  
[[-6, -6], [-15, -15]]
```

```
>>> f12([[4,3,2,1]],[[1],[2],[3],[4]])  
[20]
```

13. Write a function `f13(matrix)` that returns True if the matrix is the identity matrix, and False otherwise. Assume `len(matrix) == len(matrix[0])`.

```
>>> f13([[1]])
```

```
True
```

```
>>> f13([[1,0,0],[0,1,0],[0,0,1]])
```

```
True
```

```
>>> f13([[1,0,0],[0,1,5],[0,0,1]])
```

```
False
```

14. Write a function `f14(rows, cols)` that returns a two dimensional list where each element corresponds to how many adjacent neighbors it has. Neighbors are defined as spaces above, below, to the left, and to the right.

```
>>> f14(3,3)
[[2, 3, 2], [3, 4, 3], [2, 3, 2]]
```

```
>>> f14(5,1)
[[1], [2], [2], [2], [1]]
```

```
>>> f14(5,0)
[[], [], [], [], []]
```

```
>>> f14(0,5)
[]
```

```
>>> f14(2,2)
[[2, 2], [2, 2]]
```
